

IN THE CLAIMS:

Kindly replace the claims of record with the following full set of claims:

Claim 1 (Currently amended): A method of providing a display for a graphical user interface in which a user may define a selected point on a subject image, the method comprising the steps of:

- (i) displaying the subject image;
- (ii) displaying an enlargement of the subject image in response to a user selecting selection and a point, determined from said user selection, on which said the subject image and displaying on that enlargement is based, that point selected by the user; and
- (iii) returning displaying upon said enlargement, a the point previously selected by the user as displayed on the enlargement of the subject image upon which said displayed subject matter is based as a first co-ordinate parameter.

Claim 2 (original): A method according to Claim 1 further comprising the step of (iv) displaying a reduction of a previous enlargement of the subject image, wherein steps (iii) and (iv) are done in response to a single user input.

Claim 3 (Currently amended): A method according to Claim 1 further comprising the step of displaying a further enlargement of a previous enlargement of the subject image in response to a user selecting selection, wherein said enlargement is based on a point determined from said user selection, on that previous enlargement.

Claim 4 (Currently amended): A method according to Claim 1 wherein an enlargement of the subject image displayed in response to a user selection selecting a point on that subject image is displayed centered about said determined that point selected by the user.

Claim 5 (original): A method according to Claim 1 wherein a reduction of a previous enlargement of the subject image is displayed in the same scale as the subject image prior to enlargement.

Claim 6 (Currently amended): A method according to Claim 1 further comprising the step of returning a further second point, in response to a user selection, selected by the user as a second co-ordinate parameter.

Claim 7 (original): A method according to Claim 6 further comprising the step of performing a calculation to determine the distance between the first and second co-ordinate parameters.

Claim 8 (original): A computer program comprising instructions for performing a method according to Claim 1.

Claim 9 (original): A computer-readable storage medium having recorded thereon data representing instructions for performing a method according to Claim 1.

Claim 10 (original): Apparatus having a display, a processor and a user input device wherein the processor is programmed to perform a method according to Claim 1.

Claim 11 (Currently amended) A method according to Claim 7 wherein the step of performing a calculation further comprises:

determining distances between the first and second co-ordinate parameters ~~that is not a straight line distance but instead is a determination of~~ as an actual distance that can be traversed to connect the first and second co-ordinate parameters.

Claim 12 (previously presented): A method according to Claim 11 wherein the first and second co-ordinate parameters are a pair of points on a map and the determination of

actual distance includes at least one permissible travel route between the pair of points on the map.

Claim 13 (Currently amended): A method selecting points on a graphical user interface of a display comprising:

- displaying a subject image;
- enlarging the subject image in response to selection of an area ~~a point~~ on the subject image; ~~and~~
- determining and displaying ~~[[the]]~~ a point upon which ~~selected on~~ the enlarged image is based; and
- identifying the point selected as displayed on the enlarged image of the subject image as a first co-ordinate parameter.

Claim 14 (previously presented): A method according to Claim 13 further comprising displaying a reduction of the enlarged image following identifying the point selected in response to a single user input.

Claim 15 (Currently amended): A method according to Claim 13 further comprising the step of displaying a further enlargement of the enlarged image in response to a user ~~selecting a point on that previous~~ selection on said enlargement.

Claim 16 (previously presented): A method according to Claim 13 wherein the enlarged image is displayed centered about the point selected.

Claim 17 (Currently amended): A method according to Claim 13 further comprising the step of:

- determining and returning a further second point selected by the user based on a user selection as a second co-ordinate parameter.

Claim 18 (previously presented): A method according to Claim 17 further comprising the step of performing a calculation to determine the distance between the first and second co-ordinate parameters.

Claim 19 (Currently amended): A method according to Claim 18 wherein the step of performing a calculation further comprises determining distances between the first and second co-ordinate parameters ~~that is not a straight line distance but instead is a determination of~~ as an actual distance that can be traversed to connect the first and second co-ordinate parameters.

Claim 20 (Currently amended): A method according to Claim 19 wherein ~~the first and second co-ordinate parameters are a pair of points on a map and~~ the determination of actual distance includes at least one permissible travel route between the pair of points on the map.
